Mont Kiara, Kuala Lumpur, Malaysia

IndigoVision's IP Video technology is providing CCTV surveillance for Mont Kiara, an exclusive development of condominiums located in the suburbs of Malaysia's capital city, Kuala Lumpur. Mont Kiara is a global community that attracts affluent professionals as well as a diverse group of expatriates.

The IP CCTV system was installed by IndigoVision's local partner Multi Optochem Sdn Bhd using a Motorola Canopy wireless IP network. The system consists of 38 cameras monitoring the streets and amenities in a two mile radius around the condominium complex. Following an analysis of competing systems, IndigoVision was chosen, having shown that the system can deliver excellent video quality with a low bandwidth requirement as well as a fully scalable solution and excellent features from its 'Control Center' software.

'Control Center' is IndigoVision's enterprise video and alarm management software and is used in the control room complex situated in the shopping center. Five security staff on a 24-hour rotating shift monitor live video from the cameras via the 'Control Center' workstation and on a 16 monitor video wall. 'Control Center' coupled with two IndigoVision Networked Video Recorders (NVRs) provide up to 60 days of recording and a suite of tools for the fast search and analysis of recorded footage.
