

This project demonstrates that after 6 years operation in a high-security application IP Video is truly field-proven, with the airport continuing its commitment to IP Video technology for many years to come.

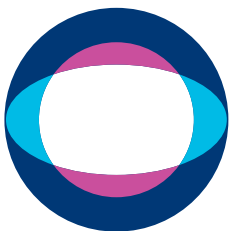

Brussels International Airport

In 2001 Brussels International Airport was a pioneer of IP Video when it installed what was then the largest networked video CCTV system in Europe. Based on IndigoVision's IP Video technology the 700+ camera system was installed using their existing LAN and interfaced to the Airport Management System. One of the main reasons for choosing an IP Video solution from IndigoVision was its flexibility and scalability which would accommodate the Airport's growth plans and allow a smooth migration path to newer technology in the future.

Six years on Brussels Airport is benefiting from their early decision to deploy IP Video by upgrading their current IndigoVision 6000 series technology with the latest series 8000 MPEG-4 product. As well as providing DVD quality video the 8000 series will give Brussels Airport access to real time analytics.

Managed by IndigoVision's local partner Fabricom GTI, Security Division, all 800 of the original series 6000 transmitter/receiver units will eventually be replaced with over 1000 of the new 8000 units by the end of 2007, providing additional surveillance in addition to the benefits of the newer technology.
